The multidimensional model of human functioning

Developmental Disabilities 20

Social aging

Social aging refers to changes in a person's roles and relationships, both within their networks of relatives and friends and in formal organizations.

If a society views aging positively, the social aging experienced by individuals in that society will be more positive and enjoyable than in a society that views aging negatively.

Social support, opportunities for education and lifelong learning, peace, and protection from violence and abuse are key factors in the social environment that enhance health, participation and security as people age.

Emergence of an intellectual disability

Genetic cause	Neurological cause	Other biological causes	Traumatic cause	Social cause
Down syndrome Fragile X syndrome	Brain malformation Problems at birth (ex. lack of oxygen...)	Maternal disease Infection during pregnancy Nutritional deficiency Because of an illness: Meningitis Whooping cough Measles	Head trauma during childhood	Environmental influences (alcohol, drugs, ...) Exposure to toxins (lead, mercury, ...) Labour- and delivery-related events
